Education

- **CUNY Hunter College** — New York City, USA
  Bachelor in Computer Science — *Aug 2022 - June 2026*

Experience

- **DCB.com** | React, TypeScript, TanStack Router, tRPC, Tailwind CSS, Node.js, Figma
  Software Engineering Intern — *Jun 2026 - Jul 2026*
  - Built the frontend of a fintech banking web app in React, TypeScript, TanStack Router, and Tailwind CSS, turning Figma designs into responsive, production-ready UI on top of existing backend services.
  - Implemented core banking workflows (authentication, account management, transactions, and card controls) on a library of reusable React components for consistent UI.
  - Connected the frontend to Node.js backend services through type-safe tRPC procedures, adding form validation, loading states, and error handling for reliable user interactions.
- **Career Launch Tech Initiative** | React.js, Node.js, Express.js, RESTful APIs
  Software Engineering Intern — *Feb 2026 - May 2026*
  - Overhauled the AI Resume feature end to end in React and Node.js, using the Google Gemini API and prompt engineering for resume parsing, tailored resume generation, and ATS grading.
  - Built a parsing pipeline that turns uploaded resumes into structured data with 95%+ accuracy, plus Gemini prompts that generate resumes tailored to a target job description and grades them.
  - Developed an ATS grader that scores resumes against job requirements returning actionable suggestions to users.
  - Designed and built 10+ RESTful API endpoints in Express.js supporting the AI workflows and core product features.
  - Iterated on UI/UX through weekly code and feature reviews with senior engineers; built accessible React components reused across 5+ features.

Skills

- Programming Languages Python, C++, HTML, CSS, JavaScript, TypeScript, SQL
- Frameworks & Tools React.js, Express.js, Node.js, FastAPI, Postgres, MongoDB, AWS (Lambda, API Gateway, RDS), Jest
- AI & LLMs TensorFlow, Gemini API, Prompt Engineering, Claude Code

Projects

- **Course Chat** | React.js, TypeScript, Node.js, MongoDB, Socket.io, JWT, Jest, GitHub Actions
  - Built a real-time group chat app for CS classes with React (TypeScript), Node.js, MongoDB, and Socket.io, supporting active-user tracking, typing indicators, and instant message delivery.
  - Designed JWT-authenticated REST APIs for user auth, chat rooms, and message history, with form validation and error handling across the stack.
  - Wrote automated tests with Jest and configured a CI/CD pipeline via GitHub Actions.
- **Nexus** | AWS CDK, AWS Lambda, API Gateway, EC2, Docker, Heroku
  - Co-built a social gaming platform with a team of 5, featuring a friend system, real-time chat, and a recommendation engine.
  - Provisioned cloud infrastructure with AWS CDK and deployed the backend on Lambda and API Gateway with a Heroku database.
  - Hosted the recommendation system in Docker containers on EC2.
